PRACTICES ADOPTED FOR BALANCING THE LOAD OF HOMEWORK

INNOVATIVE PRACTICES IN TEACHING METHODOLOGY

Doon International creates a platform which is inspiring and unforgettable for every child. We know that school is the second home of a child. So, we take utmost care of students. Our teachers use innovative methods of teaching to reach out to the minds of the students and win their hearts. While a few years ago, one would only see such innovative and effective teaching only on the screen, Doon International School, Amritsar has given teachers the best technology and a number of tools to enhance teaching methods. Every classroom is equipped with a smart board as we believe students can understand better through visual aids.

We use another innovative method: Teaching Through Collaboration.

Today, we live in a globalized world and collaboration is an essential life skill that is important for all careers and enterprises. Our teachers help foster this skill in the classroom by allowing students to learn, study and work in groups, maintaining the decorum and discipline. Role play discussion and other activities are held through collaboration method.

The school also uses: Teaching through Virtual Reality

Virtual Reality technology involves helping students learn through interactions with a 3D world. For instance, instead of taking the students through a boring history class, our teachers use 3D technology to explore ancient civilizations, travel to distant countries for a class in geography or even take a trip to outer space during a class on science through effective use of smart board. We also make field visits to give them practical knowledge.

We have a committee that ensures that the faculty is making students learn through innovative methods. The committee works in parallel to the students and the teachers. The meeting is held every month wherein the teaching methodology is updated and new ideas given by the teachers are welcomed.
